

SecureStrap™

INSTRUCTIONS FOR USE

SecureStraps are made to adjust to a variety of spa sizes. The adjustment is made simply by altering the position where you mount the buckles to the spa.

Determining the HORIZONTAL position of the buckles:

1. Prior to affixing the buckles to the side of the spa, determine which side of the spa you will be latching and unlatching the locking buckle from.
2. Determine the ideal height level that you would like the locking buckle to be. Then see if this position is compatible for securing the buckles on the other side of the spa. You may have to make a slight location adjustment up or down so that the buckle affixes securely to the spa cabinet on both sides.

Determining the VERTICAL position of the buckles:

1. So that the straps have the most leverage to keep the spa cover in place during periods of high wind, the straps should be centered over each half of the spa cover.
