

# WATER TESTING

Using @ease™ Test Strips here are a few possible scenarios and what, if any, action is required for each:

## SCENARIO #1

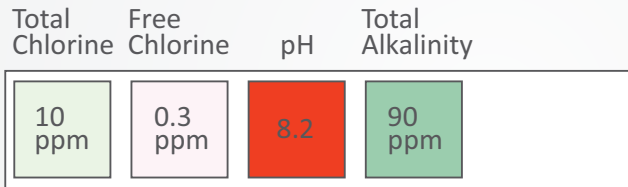

IDEAL RANGE: 3-15 0.5-1.0 7.2-7.8 80-120

Everything is fine,  
no action is needed.

## SCENARIO #2

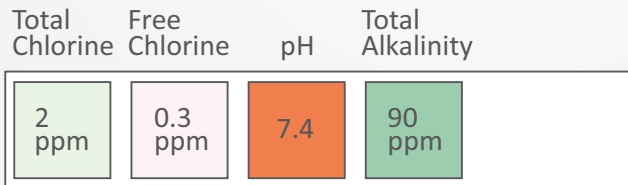

IDEAL RANGE: 3-15 0.5-1.0 7.2-7.8 80-120

The Free Chlorine residual is low and the pH is too high.

Add "pH Down" to bring the pH into the 7.2 to 7.8 range. The Free Chlorine residual will come back up to 0.5 after the pH adjustment is made.

## SCENARIO #3

IDEAL RANGE: 3-15 0.5-1.0 7.2-7.8 80-120

The Total Chlorine and Free Chlorine are low.

The SmartChlor™ Cartridge needs to be replaced and it's time to shock the hot tub.
